5.4. Sensor (ISX019) Register Settings

Sensor setting will be loaded from on-board SPI flash automatically after power up.

6. Special Note

ISX019 is System On Chip image sensor with ISP (Image Signal Processor) . Image are captured and transmitted with 8-bit YCbCr data from camera through coax cable.

Usually, Gamma curve is applied to get 8-bit image to improve dynamic range for application.

7. System Configuration (TBD)

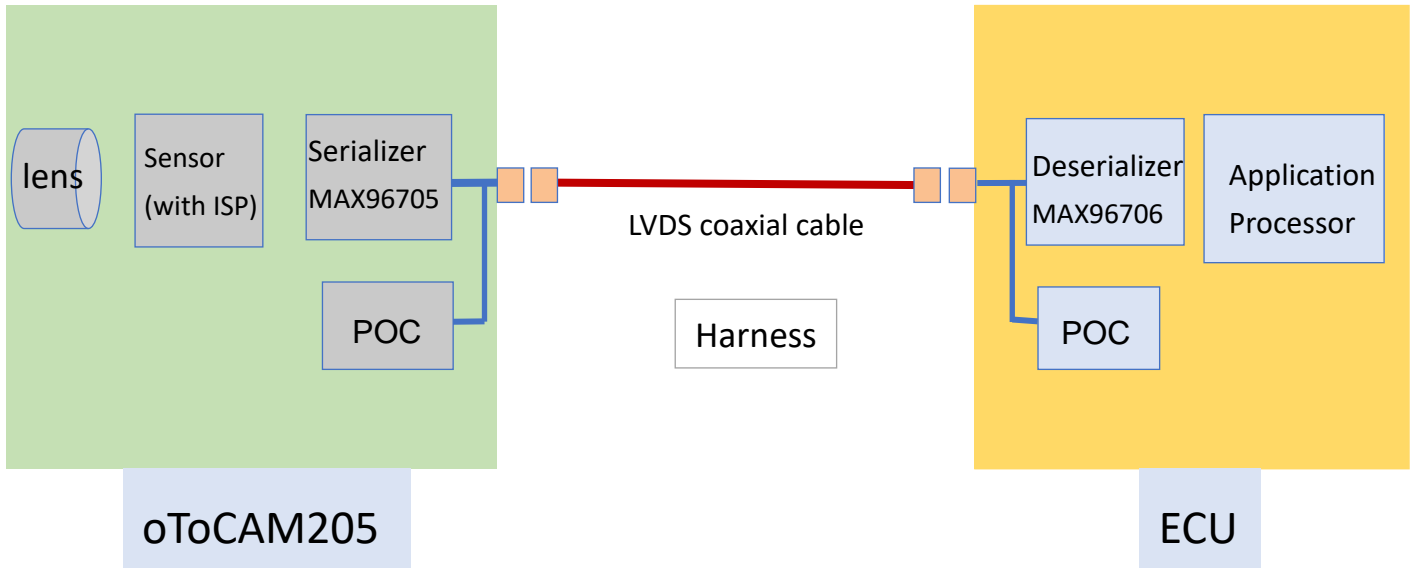

Figure 3. System Configuration

Maxim GMSL Max96706 / Max9288 Deserializer must be used as receiver in ECU for connecting oToCAM205.
